

Smart lighting from Plejd

Congratulations!

Your home is equipped with smart lighting from Plejd. The installation is complete, and you can easily control the lighting with your usual light switches or via the Plejd app.

Here are a few simple steps to get started:

1. Download the Plejd app on the App Store or Google Play.
2. Create a user account in the app.
3. Connect to your new system by entering your system code.

The Plejd app

The app is a complement to the traditional light switch. It acts as a simple tool for configuring and controlling the lighting in your home.

You can also control your scenes with Apple Watch or with our widget in your smartphone. These features require a Gateway.

Scenes

You can easily create scenes that suit your needs and activate them from your usual light switches or the app. Turn off all lights with the push of a button in the hallway, or use the app to start the movie night scene from the comfort of the couch.

Time functions

All our products have a built-in astro/time schedule. This enables you to schedule your lighting. Automatically turn on your outdoor lighting when the sun sets and off when the sun rises.

Gateway functions

With our Gateway, you can control the lighting remotely and use vacation mode. When you're away from home, you can let vacation mode switch your lighting on and off automatically. Gateway enables integration with third-party systems such as Google Home and Apple HomeKit® and enables voice control.

Google and Google Home are trademarks of Google LLC. Apple, HomeKit®, App Store are trademarks of Apple Inc. registered in the U.S. and other countries.

With our Gateway you will be able to control your Plejd lighting wherever you are.

Expand your Plejd system

Your Plejd system is easy to expand when needed, making it perfectly fine to start with one product and then supplement with more products. An extended system provides more benefits, such as the ability to control all your lighting with the press of a button or remotely via the Plejd app.

Contact your electrician for more information.

About Plejd

We develop all our products and services in-house. By having complete control of the entire chain, from first sketches and ideas to finished products, we can develop our products safely and securely to meet both our high demands and external requirements. Our products are manufactured in Sweden, some directly in our own production facility. We focus on high quality, ease of use, and service. We believe it is essential that our customers are happy with their choice of Plejd. Find out more about us and our products at plejd.com.

If you have any questions about Plejd or our products, you are welcome to contact us for further information.
